Cell'Logic… the end-of-year challenge!

The "Mot des AP" game

A cell line is seeded in a 175 cm² flask containing 25 mL of culture medium.

Each day, the cell population doubles.

On day 10, the cell monolayer reaches 100% of the flask's maximum capacity, corresponding to 100 million cells.

On which day did the culture occupy 50% of its maximum capacity, corresponding to 50 million cells?
